

This is a place that you can go and become educated about the various technologies that are used in automatic storage and retrieval crane systems.

You get access to some industry data and statistics.

Very useful if we're going to understand what's going on in your business.

It allows people to go vertically with storage to save space on building size. It allows people to do things more efficiently with less labor needed, so you can get out of those tricky labor situations where people just don't wanna do difficult jobs.

Folks can benefit through operating cost reduction, real estate cost reduction, footprints, energy savings, as well as simplicity of the integration with their existing systems.

The first go-to point if you are talking about investing in automation is the MHI ASRS group.

People unfamiliar with the technology can go to the ASRS website, to the MHI website, educate themselves and find information that is non-biased. It's not necessarily tailored towards a particular OEM, but it benefits the customer because it's more like a learning tool.

We have a lot of expertise and knowledge to bring to the industry.

We provide data-driven, robotic, and flexible solutions, and customer value through more efficient operating of facilities through automation, reduced labor costs, reduced building and energy costs, due to a smaller building footprint.

We can maintain a safe working environment and safe use of our machines.
